LUCAS MARTINS

GAME PROGRAMMER / C++ DEVELOPER

(15) 98178-2217 I lucasmartinsti@outlook.com
Linkedin.com I Github.com

Computer Engineering student in my final year with a solid foundation in software architecture and a focus on game and graphics engine development. I am proficient in low-level programming with C++ and graphics API manipulation (OpenGL 3.3), as well as agile gameplay development in Unity (C#). With experience in the 3D art pipeline (Blender, Substance Painter), I work fluidly between systems engineering and asset integration. I am seeking to join a game development team to apply my analytical skills, knowledge of physics and rendering, and passion for software architecture.

EDUCATION

Computer Engineering - FACENS

Feb. 2022 – Present

Full-scholarship student awarded first place in the Facens Code programming competition for developing an educational gamified application about sustainability.

PROJECTS

Crossy Road Like (Unity)

3D mobile game in the endless runner rogue-like style. Complete implementation of gameplay logic, player movement, procedural environment generation, and scoring systems using C#.

RocketBuilder-AR (Unity/Augmented Reality)

Interactive Augmented Reality application for a university project, focused on spatial interaction and 3D object physics.

Systems Architecture (UmbraCore)

Development of a rendering engine built from scratch in C++. Focused on low-level programming, memory management, performance optimization, and complex object-oriented programming.

3D Modeling and Technical Art

Development of stylized/low-poly characters and assets. Proficient in the complete workflow, including modeling in Blender and detailed texturing (projection painting) using Substance Painter.

EXPERIENCE

DP Automação
Apr 2025 - Present

- Development of PowerShell scripts to automate security and firewall rules.
- Administration and development of complex queries in relational databases (SQL/Firebird).
- System troubleshooting and rebuilding of corporate web pages.

Deeliv
Mar 2023 - Mar 2025

Internal tool engineering in JavaScript for direct manipulation of visual attributes on clients' websites, automating processes and drastically reducing technical ticket resolution time.

SKILLS

- Programming & Back-end: C++, C#, Java, JavaScript, SQL.
- Web Development & Front-end: HTML/CSS, Angular, React, Tailwind CSS, Vite.
- Databases: SQL Server, MongoDB, Firebird.
- Game Development & Computer Graphics: Unity (UI Toolkit, Shader Graph, Multiplayer), Augmented Reality (AR Foundation/Core), OpenGL, Low-level Game Engine Architecture.
- Engineering & Automation: Software Architecture, Infrastructure Automation, Graphics Rendering Pipeline, Bug Fixing and Advanced Troubleshooting.
- 3D Design: Blender Sculpting and Low Poly, Pixel Art.
